Education

Wuhan University

Expected June 2027

B.Eng. in Software Engineering

GPA: **3.84/4.00** Rank: **3/53**

Research Interests

My research interests include **AI for Medicine / AI for Healthcare** and **Trustworthy Multimodal Large Language Models**. I am interested in reliable and interpretable medical AI that uses clinical concepts, multimodal evidence, and reliable reasoning under limited supervision and distribution shift, as well as hallucination, grounding, OOD generalization, reliability evaluation, and reliability-oriented tuning and post-training.

Research Experience

Interpretable Semi-Supervised Diabetic Retinopathy Grading

Oct. 2024–Present

Research Intern, MARS Group, Wuhan University; advised by Prof. Mang Ye and Prof. Qingxiong Tan

- **Led** method design, implementation, experiments, and primary manuscript drafting for an interpretable semi-supervised framework for diabetic-retinopathy grading under limited lesion annotations.
- **Developed** distribution-aware unlabeled-sample selection and concept-infused pseudo-label refinement using clinically informed grade–lesion relationships.
- **Evaluated** diagnostic prediction and lesion-concept prediction, including component-level analysis of the selection and refinement mechanisms.

Publications

“Semi-Supervised Concept Infused Pseudo-Label Refining for Interpretable Diabetic Retinopathy Grading.”

Yuxuan Gao, Chi Wen, He Li, Qingxiong Tan, Mang Ye. *ICASSP 2026*.

Honors & Awards

- **Lei Jun Computer Science Scholarship** — *20 students department-wide*
- **Research Practice Grant Recipient**, Lei Jun Fund for Innovation and Development in Computer Science
- **Merit Student** — *Top 10% university-wide*
- **Second Prize**, National English Competition for College Students (Grand Final)
- **Second Place Prize**, Forum of Sciences & Arts of Nanjing University

Technical Skills

Programming: Python

Machine Learning: PyTorch, Hugging Face Transformers, NumPy, pandas

Tools: Git, LaTeX
